In Today's Market, Certified Products Are Essential

Regulators worldwide increasingly depend on AHRI for accurate, unbiased evaluation of heating, ventilation, air conditioning, and commercial refrigeration equipment.

Our certification programs demonstrate to government, building owners, and homeowners that equipment performance claims have been independently measured and verified, instilling consumer confidence and enabling fair product comparisons.

To be certified, products undergo rigorous testing by independent laboratories under contract to AHRI. Equipment and components are evaluated using the appropriate industry standard to certify that published performance ratings are accurate.

Only upon performance verification can manufacturers apply the AHRI Certified® mark to the certified product as a visual statement of conformance.

In addition to earning the right to bear a certification mark, certified equipment is listed in the AHRI Directory of Certified Product Performance (www.ahridirectory.org), the trusted source for performance certified equipment. This online, real-time database allows contractors and consumers to search by product lines, certified ratings, or manufacturer, to get the information they need, when they need it.

Why Certify?

Because it ...

- Raises consumer confidence in product quality
- Increases integrity of industry ratings
- Promotes innovation and drives efficiency
- Increases the speed to market of new technology
- Provides basis for business/government cooperation
- Influences state and federal regulation
- Facilitates compliance with minimum efficiency standards
