## Unitary Small Equipment Tolerance Adjustment for EER<sub>A</sub> Certified Metric

## **CERTIFICATION PROGRAM**

AHRI's globally recognized and industry-respected program certifies the performance of HVACR and water heating equipment. Products certified through the program are continually tested by a third-party laboratory to determine the products' ability to conform to the product rating standards and/or specifications.

Unitary Small AC AHRI Standard 210/240

Certification applies only when the complete system is listed with AHRI.

Unitary Small HP AHRI Standard 210/240

Certification applies only when the complete system is listed with AHRI.

The Air-Conditioning, Heating, and Refrigeration Institute (AHRI) is the world's most trusted source of performance certified heating, cooling, ventilation and commercial refrigeration equipment and components. The AHRI Certified® reputation is an important asset in the sale of every manufactured HVACR product.

In order to maintain the value and integrity of the AHRI Certified mark, AHRI regularly reviews program guidelines and makes adjustments as needed. Beginning in 2015, the Unitary Small Equipment certification program will require a tolerance of 5 percent for its energy efficiency ratio (EER) certified metric. This adjustment will align the program with Department of Energy requirements.

The EER<sub>A</sub> metric is calculated by dividing the capacity by the total system power. This change will place the metric within 95 percent of the rated value. The <u>AHRI Directory of Certified Product Performance</u> will display the most up to date ratings for these products, as manufacturers make adjustments to prepare for the change in 2015.
